To Whom It May Concern:

I am pleased to compose this letter of endorsement for Safenet and proud to say that it is based on a close professional relationship during my two years in Iraq.

Safenet and ECC joined forces in 2004 as the Multi-National Security Transition Command-Iraq began the "Rebuild Iraq Program." Initially, Safenet provided our security services, and they did so in a manner that made it clear that they were an organization skilled at accommodating their client's requirements rapidly, effectively, and efficiently. Leadership is their hallmark, and from the senior management team, which by the way is always in country and personally in touch, down to the small unit leaders at specific sites, they set an example second to none in motivating their teams and accomplishing their mission. They are adaptable to changing situations as they provide a flexible response to meet client needs, even in the face of competing demands. For example, Safenet was known for being the first company to operate in a "low profile PSD mode" in Iraq, the first company to deploy 360° rotating gun turrets on the "high profile PSD vehicles" as well as the first company to provide "air PSD services" ensuring the safety of ECC, our client, and other US governmental organizations to and from myriad sites throughout the region.

One of the primary reasons behind Safenet's success is their ability to find talented people who share their corporate values and blend exceedingly well with their clients and the US military. So dependable was Safenet that when faced with the challenges of recruiting and hiring American construction and engineering professionals, we looked to Safenet for relief through their networks in South Africa. Safenet answered our call with skilled and experienced construction and engineering professionals who were able to fill many of our most challenging project and construction management, project engineering and quality control positions. Without exception, the many men from Safenet who joined forces with ECC's project teams excelled at their jobs, and they did so as full team members by earning the complete trust and confidence of ECC.

Important to note is that Safenet's success story with ECC took place in Iraq's toughest project sites during the war. Baqubah, Tikrit, Ramadi, Kirkuk, Baghdad, Fallujah are among the locations where Safenet's professional applied their skills. Even in the worst conditions, Safenet never let us down.

For me, Safenet has been particularly valuable because one of my chief responsibilities is client communications through briefings, meetings, site visits, and other fora. Whenever such client interaction involved a member from Safenet, I knew that our client would hear and see the ground truth. I was always--and continue to be--proud, pleased and confident in the men from Safenet.
